Micron Press

Description

Our "Micron Press" is designed for shooting range ammunition reloading. Despite its compact size, it ensures high precision in ammunition processing. The press supports installation on the table using two screws or two slots for clamp attachment. It comes only with a 7/8 UNF thread.

Features

Sturdy Construction: Made from durable steel (AISI 304) and high-quality aluminium (alloy 7075 & 6082), the press ensures stability and longevity, even during intensive use. The "Micron Press" weighs approximately 3,5 kg.

Ammunition: ammo can be reloaded up to the large prime

Lever System: The press has an ergonomic lever system that reduces fatigue during reloading, thanks to the long arm.

Primer: does not include primer seating.

Easy transportation thanks to its minimal dimensions

Technical Specifications

Total stroke: 100 mm

Central column diameter: 25 mm

Standard dies: 7/8 UNF

Usage and Maintenance

The press requires minimal maintenance except emptying the primers expelled from the dedicated tube.
